

## Nexion - Installation

### General Installation

To Install Nexion cPanel skin on a server, You need to first download the Nexion-theme file ( Ex : **Nexion\_Red.cptheme** ). You can download the skin from your cPanelPlus.net member-login.

Once you have this file on your computer, the next step is to open a browser and login into your Server's WHM ( **https://yourserver-IP:2087** ) as root. After login into WHM as root, Please go down to the 'Themes' section. Select the "**Install a New Cpanel Theme**", in the upload form point the browser to the downloaded 'skinname.cptheme' file on your local computer and upload the skin. Once you have installed the new skin you have to assign the skin to the domain name you want.

**Note:** You can also configure you new skin as the default skin for the your New hosting Accounts.

If you are facing any Problems installing the skin please contact us at [support@cpanelplus.net](mailto:support@cpanelplus.net), we will install the skin for you.

### Manual Installation

You can also install a theme by manually uploading the theme files into the server. Download the Nexion cPanel Skin ( Ex: **Nexion\_Red.cptheme** )to your computer.

Rename this file to a .tar.gz extension ( Ex: **Nexion\_Red.cptheme.tar.gz** )  
Extract this file using WinZip or PowerArchiver, to a folder say '**Nexion\_Red**'.

Upload this folder into the '/usr/local/cpanel/base/frontend/' folder of your cPanel Server.

**Note :** For Uploading the files to the server, you can use any sftp client  
( like Secure File Transfer Client from ssh.com )
